Scenario:

You are working on a project with a team of developers. The project repository has a main branch called main and a development branch called dev. You have been assigned a task to add a new feature to the project.

Tasks:

1. Clone the Repository
2. Create a Feature Branch
3. Implement the Feature
4. Commit Your Changes
5. Push the Feature Branch
6. Create a Pull Request
7. Review and Merge
8. Update Local Branches
9. Resolve Conflicts (if any) and Push the Final Changes

Note: Make sure to document each step you perform with appropriate Git commands and screenshots (if applicable).
