## Project Statement: Deploy a Static Website on AWS Elastic Beanstalk

### Prerequisites

- AWS Account: You need an AWS account. If you don't have one, you can sign up for free.
- AWS CLI: Install the AWS CLI on your local machine and configure it with your AWS account credentials.

### Task to be performed:

1. Create a Simple Static Website
2. Prepare the Application for Elastic Beanstalk
3. Create and Deploy the Elastic Beanstalk Environment
4. Access Your Application
5. Update Your Application
6. Terminate the Environment
