Continuous Integration using Jenkins

Project

edureka!

Problem Statement

You are working as a DevOps Engineer in a company named Sanders & Fresco Pvt ltd. You have been asked by your manager to create a Maven Project using Jenkins and build a war file of that project. As a proof of concept, you have been given a web application to build. And once done with building the war file, deploy it over the tomcat server.

Steps to solve:

- Open Jenkins and create a Maven project using it.
- You will have to create the following jobs, which are as follow:
    - Compile
    - Code Review
    - Unit test
    - Package
    - Deploy

You have to complete your job within the given time frame.
